ELECTRIC FILLET KNIVES

Experience precision and affordability in perfect harmony with the Old Timer® Electric Fillet Knife. Unleash high-functioning filleting prowess without breaking the bank, delivering a remarkable value that empowers both seasoned anglers and newcomers alike. Elevate your filleting game with a tool designed to perform and priced to impress.

110V ELECTRIC FILLET KNIFE

SKU: 1140755 • **UPC:** 661120107507
AOB.COM/PATENTS

8.25 INCHES *8 INCHES*

8IN STAINLESS STEEL BLADE | **16.25IN** OVERALL LENGTH | TRIGGER LOCK | CARRY CASE INCLUDED

The Old Timer® 110V ELECTRIC FILLET KNIFE comes with an 8 foot cord for better accessibility whether you are filleting at the dock or by the shed. Much like most of you, we were tired of other knives not having enough cutting power or breaking due to poor construction and materials. Our Electric Fillet Knives are designed and built to take out all the frustrations every fisherman has dealt with for far too long. Our "Built for Generations™" mission didn't stop at folding and fixed blades; it stretches across all knife categories. The electric fillet knife comes with a carrying case for easy on-the-go storage and a new 8 inch stainless steel optimal blade. This blade allows for easier cutting so you can spend more time fishing and less time filleting.

8" ELECTRIC FILLET KNIFE BLADE

SKU: 1171774 • **UPC:** 661120265221

8 INCHES

8IN STAINLESS STEEL BLADE | OPTIMAL BLADE CURVE | DUAL-RIVET BLADE DESIGN

8" STAINLESS STEEL BLADE to compliment our electric fillet knives. The optimal curved blade mimics a traditional fillet knife shape to give you the classic fillet rocker cut motion. This shape, along with the added serrated edge and the functionality of the electric fillet knife, allows for easier filleting.

TRADITIONAL KNIVES

Embrace the legacy of Old Timer® with our traditional knives, where unmatched value and affordability meet timeless craftsmanship. Each knife embodies the essence of our name, a testament to generations of quality, making them an essential addition to any collection without compromising your budget.

SWITCH-IT® HUNTING KIT

HANGING BOX: 1160966 • **UPC:** 661120650393

STAINLESS STEEL BLADES | 6IN SAW BLADE | 5.25IN BONING BLADE | 4IN SKINNING BLADE | 3.75IN GUT HOOK BLADE | NON-SLIP RUBBER HANDLE | KNIFE SHARPENER | CARRY CASE INCLUDED

Experience the peak of versatility and convenience with the Old Timer® Switch-It® Kit – a game-changing innovation designed to revolutionize your cutting experience. Unleash your inner craftsman with the Old Timer® Switch-It® Kit's four high-quality stainless interchangeable blades. Included blades are a 6" bone saw, 5.25" boning blade, 4" Sharpfinger® blade & 3.75" gut hook blade. Crafted for ergonomic excellence, the non-slip handle guarantees a secure grip that enhances your cutting control and reduces hand fatigue. This means you can focus on skinning and quartering your trophy without any compromises in comfort. Included is a dishwasher-safe case with a built-in knife sharpener so you can always stay sharp in the field. Whichever blade processing your trophy calls for, Just Switch-It®.

- Dishwasher-safe case for easy cleaning and all-in-one storage solution
- Knife Sharpener included for peace of mind
- Full game processing assortment to limit the amount of knives taken into the field
- Easy blade release for quick changing of blades
- Rubberized non-slip grip to keep a great grip in the messiest of situations
- Corrosion-resistant and easy-to-sharpen steel, most applicable for hunting knives

SCHRADE ICONS

AUTOMATIC ACTION

Going back to the roots of its founder George Schrade, and building on his 1892 patent of the original switchblade, Schrade® once again looks to dominate the automatic knife market. Utilizing its mission of being "rooted in history, ready for the future", Schrade automatic folders once again feature the famous push button mechanism made popular by George Schrade, this time with a modern, parallelogram button that you'll also find in the middle of the Schrade icon. George Schrade's patent of the automatic might date to 1892, but the new automatics are definitely ready for the future, with leading-edge designs, ultra-fast and smooth actions and positive lockups.

NITRO® ASSISTED

Schrade assisted folding knives got a complete overhaul and the new Nitro® Assisted action utilizes a simple, yet effective design that lives up to its namesake and ensures an ultra-fast, smooth and positive lockup. Designed for years of use and abuse, the Nitro Assisted line of folders make the perfect sidekick for your EDC needs.

DOUBLE ACTION

What better way to kick off the new Schrade than with a line of double-action, out the front automatic pocket knives? That's right, we said automatic! Following in George Schrade's footsteps of being on the forefront of knife technology, Schrade once again sets the bar for the industry. The new proprietary double action automatic action is an unbelievable combination of speed, durability and functionality that will have you wondering how it's possible you're holding an automatic knife.

OUT THE FRONT

Once again focusing on being "rooted in history, ready for the future" mantra, Schrade brings back its proprietary and wildly popular OTF (Out the Front) assisted action. Featuring a smooth, ultra-fast blade release and positive lockup, this action is field-tested and designed to last a lifetime of use.

ULTRA GLIDE®

Every manual folding knife features the world-famous Schrade Ultra Glide® bearing system. Gone are the days of struggling to quickly open and close your folding knife. This tried and true mechanism ensures the quickest, smoothest action you've ever felt on a folding knife.

PIVOT LOCK

The Schrade pivot locking mechanism, coupled with the Schrade Ultra Glide bearing is ultra-smooth, allowing for quick opening and closing. Designed to be the most effective locking system for folding knives, the pivot lock mechanism is reliable and durable, ensuring a lifetime of use and abuse.

LIMITED LIFETIME WARRANTY

What's the point of making a product that you won't guarantee to be dependable, durable and designed to last a lifetime? That doesn't fly at Schrade! All of our knives and tools are backed by a Limited Lifetime Warranty.

MADE IN USA

U.S.A.! U.S.A.! We're back! Schrade brings production back to the greatest country on earth, the United States of America. Standard on all ALPHA Class knives and select BETA Class knives, if you see the Schrade "Made in the USA" stamp on a product, you can rest assured that it was made with good ole American muscle, grit and sweat.

ASSEMBLED IN THE USA WITH FOREIGN AND DOMESTIC PARTS

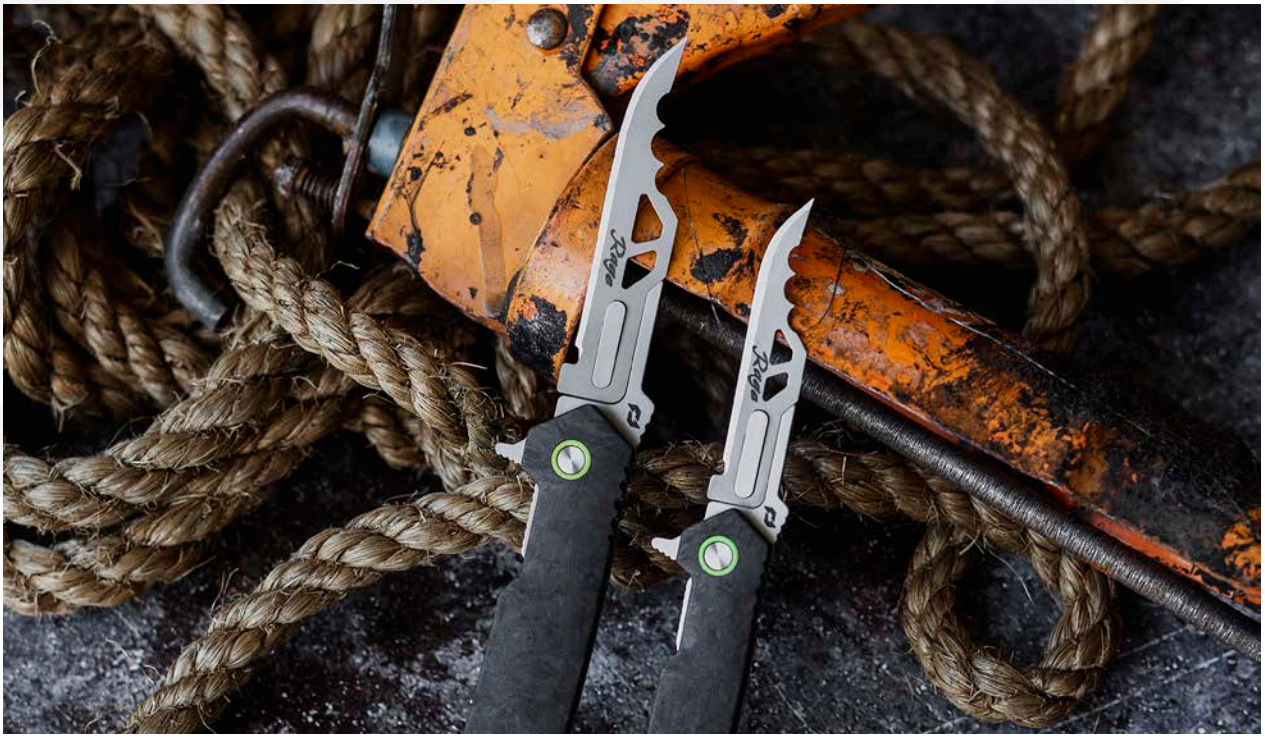

Schrade is proud to offer their new lineup of knives and tools that are assembled in the U.S.A of domestic and foreign components. These BETA Class knives feature high-quality knife blades that are made in the United States of America, but source other materials at the best price we can in order to offer a high value knife.

INCLUDED SHARPENER

The included sheath has an integrated sharpener built in for convenient in-the-field edge maintenance.

INCLUDED FERRO ROD

The included sheath has an integrated ferro rod built in for any firestarting task.

UPROAR FAMILY

REINVENTING THE VALUE OF THE DOUBLE-ACTION OTF

Ready in an instant, the Schrade® Uproar™ family has reinvented the value of the double-action out the front knife. In a $300 market, the Uproar™ family comes in at a fraction of the price of the competition. With their slim, easy-to-grip aluminum handles, Uproar™ knives spring open to be ready to use instantly and can immediately retract back into the handle the moment you're finished cutting. In addition to the ease of use, the Uproar™ family sports quality D2 steel for a strong and durable blade and is assembled in the USA with foreign and domestic parts.

OVERALL LENGTH	7.5"
WEIGHT	3.3 oz
LOCK STYLE	D/A OTF
INTENDED USE	EDC

PRODUCT DESCRIPTION

We created the Uproar™ Family to make some noise by offering premium specs without costing an arm and a leg. Each Uproar™ undergoes a rigorous 100-cycle test after being assembled in Columbia, Missouri, ensuring your knife is ready to go. Say goodbye to expensive OTF knives that collect dust and say hello to your new OTF Daily Driver. Join the Uproar™ Revolution today!

FEATURES AND BENEFITS

- Textured aluminum handle for durability and grip
- Pocket clip for comfortable deep pocket carry
- Glass Breaker to Lead the Pack in emergency situations
- Dual-edge partially serrated D2 steel known for its toughness and long-lasting ability
- Double-action OTF allows one slide of the button to open and close the knife
- Assembled in the USA

PRODUCT DESCRIPTION

Recognizing the growing trend and demand for high-quality pivot locks in the knife community, Schrade introduces the Turnkey. This knife features a premium CNC swept blade grind and a high-strength pivot lock, combining elements typically found in more expensive knives. With its rock-solid design, reversible pocket clip, and smooth face with exterior lines for enhanced grip, the Turnkey stands out as an excellent budget-friendly everyday carry option.

FEATURES AND BENEFITS

- Reversible Pocket Clip
- Secure Pivot Lock
- Outer Edge Handle Texture for Grip
- Smooth Center Handle For Easy EDC

PRODUCT DESCRIPTION

Prepare to be captivated by the Schrade® Melee™, a remarkable fusion of purposeful design and top-tier engineering. Elevate your craftsmanship with the unparalleled strength and edge retention of the D2 blade steel. Renowned for its exceptional durability, the D2 steel blade of the Melee™ transforms ordinary tasks into extraordinary feats, while maintaining its edge through even the most demanding applications. Experience the future of seamless functionality with the Nitro® Assisted Opening Mechanism. As your fingers engage the blade, feel the swift response and precision that this innovation brings to your work. The ergonomic G10 handle merges seamlessly with the steel frame, providing an exceptional grip that feels like a natural extension of your hand. The result is unmatched control, comfort, and confidence as you embark on your outdoor journey. With pride and precision, the Melee™ is meticulously assembled in the USA, a testament of our commitment to quality and craftsmanship.

FEATURES AND BENEFITS

- D2 blade steel is known for its toughness and edge retention resulting in longer blade life
- G10/Steel Handle providing grip and strength all in one
- Dual thumb studs and Nitro® Assisted Opening provides swift and easy one-handed deployment
- Frame lock provides a secure lock-up when the knife is deployed for use
- Reversible pocket clip for ambidextrous carriers
- Tanto blade with partial serrations to match tactical EDC preferences
- Assembled in the USA

PRODUCT DESCRIPTION

Experience the ultimate fusion of speed, strength, and style with the Nitro® Enrage™ from Schrade®. Crafted for those who demand excellence in every aspect of their gear, this cutting-edge folding knife is engineered to elevate your everyday carry to unprecedented heights. Say goodbye to slow and cumbersome deployment. The Nitro® Enrage™ features an awe-inspiring Nitro® Assist mechanism that propels the blade into action with remarkable speed and precision. Crafted from high-strength G10 material, the handle not only offers an exceptional grip but also stands up to the harshest conditions. Its rugged construction ensures the Nitro® Enrage™ can withstand the rigors of your adventurous lifestyle, making it the ideal companion for outdoor excursions, daily tasks, and everything in between. Imagine a blade that you ***never sharpen again*** – that's the magic of the custom Enrage™ Blades that feature Rage® Broadhead Technology.

FEATURES AND BENEFITS

- Custom Enrage™ utility blade designed with Rage® Broadhead technology easily slices through your daily tasks
- Never sharpen again with easily replaceable blades
- Nitro® Assisted Opening provides swift and easy one-handed deployment
- Frame lock ensures solid lock up when open
- Textured G10 handle offers exceptional durability, providing a secure and comfortable grip that withstands the harshest of conditions
- Tip-down pocket clip designed for safe everyday carry
- Dual-sided Enrage™ blade case for easy, no-touch replacement and additional storage for replacement blades.
- Fits all Enrage™ 7 blades

BLISTER ITEM: 1205899 **UPC:** 661120749820
BOX ITEM: 1209516 **UPC:** 661120751175

The Black Ops® Recurve Folder switches things up with a sleek grip and unique recurve blade. The inset liner lock keeps the profile slim and lightweight to fit into your EDC rotation while the pivot bearings allow for a quick and consistent deployment.

PRODUCT FEATURES

- 3Cr Blade Steel for Edge Retention and Corrosion Resistance
- Pocket Clip for Easy Carry
- Liner Lock Mechanism for Sturdy Lockup
- Polymer Scales for a Lightweight, Solid Grip
- Bearing Pivot for Quick, Smooth Deployment

CUTLERY

BORDER GUARD® TACTICAL PIVOT LOCK

M&P introduces a new tactical pivot lock that will challenge whatever comes its way. This model incorporates a strap cutter, as well as a semi-serrated blade that deploys with one-handed operation. This makes it an ideal choice for easy, discreet carry, combining the best of modern convenience with M&P's trusted performance.

PRODUCT BENEFITS

- TACTICAL DESIGN – partially serrated blade and strap cutter
- SMOOTH OPEN AND CLOSE – features UltraGlide® Bearings
- SMITH & WESSON QUALITY – a name you know and trust

PRODUCT FEATURES

- Strap Cutter
- Aggressive Semi-Serrated Blade
- Drop Point Blade Shape
- 8Cr Blade Steel
- Deep Carry reversable Pocket Clip
- Polymer Handle
- Dual Thumbstuds
- Black Oxide Blade Finish

OUT THE FRONT COMPACT TAN

M&P introduces a new mini version of our popular spring assisted OTF that is California compliant. This compact model brings the technology and reliability of our popular full-size OTF to a size perfect for one-handed operation. This makes it an ideal choice for easy, discreet carry, combining the best of modern convenience with M&P's trusted performance.

PRODUCT BENEFITS

- COMPACT DESIGN – one-hand operation and concealable
- CALIFORNIA COMPLIANT – sub 2" blade to keep you legal
- SMITH & WESSON QUALITY – a name you know and trust

PRODUCT FEATURES

- Spear Point Blade
- Deep Carry Pocket clip
- Aluminum Handle
- Assisted Opening OTF
- AUS-8 Blade Steel
- Hardened Glass Breaker
- Compact - California Compliant Blade

OTF SINGLE EDGE SPEAR POINT

The M&P Out-the-Front knife delivers rapid deployment and dependable performance in high-pressure situations. The spring-assisted blade ensures swift, one-handed deployment while the integrated glass breaker provides critical functionality for vehicle extractions. This OTF is built to serve those who protect and save lives and is legal in most states.

PRODUCT BENEFITS

- RAPID BLADE DEPLOYMENT – spring assisted thumb switch
- SAFE – features a safety lock to prevent unintentional blade deployment
- SMITH & WESSON QUALITY – a name you know and trust

PRODUCT FEATURES

- Assisted Opening OTF
- Hardened Glass Breaker
- AUS-8 Blade Steel
- Spear Point Blade
- Deep Carry Pocket clip
- Offered in FDE & Gray
- Aluminum Handle

Introducing the M&P® Folding Dagger - the ultimate self-defense tool for those who are always on the go. This sleek, 8Cr steel folding dagger is perfect for those who are always active and need a lightweight, easy to carry self-defense weapon. The Spring Assist feature makes opening fast and easy and the liner lock provides a secure lockup and easy one-hand use. Plus, the ergonomic finger loop ensures a better grip while in use. The M&P® Folding Dagger is a must-have self-defense tool that you can always have with you.

PRODUCT FEATURES

- ASSISTED OPENING FOR QUICK AND EASY ACCESS
- LINER LOCK FOR EASY ONE-HANDED CLOSE
- FINGER LOOP FOR BETTER CONTROL

M2.0®

The durable and rugged M2.0® Drop Point Fixed blade is the perfect boot or pack knife. Complete with a sheath you can lash to a backpack and quality high carbon stainless steel, this knife is great for everyday use for everyone from woodsmen to hunters. It's aggressive jimping is perfect for finer work and blade manipulation and features a deep finger groove below the guard gives you a comfortable and firm grip on the blade. The blade steel is shaped beneath the guard and handle material ensuring your hand remains protected while making more aggressive cuts in stubborn material.

PRODUCT FEATURES

- 8CR13MOV BLACK OXIDE COATED HIGH CARBON S.S. BLADE
- RUBBER OVERMOLDED HANDLE
- FULL TANG
- THUMB JIMPING
- THIN PROFILE
- LANYARD HOLE
- NYLON FIBER SHEATH

SPECIAL OPS® SURVIVAL KNIVES

A modern twist on a classic design, these knives are ready for your toughest tasks. With heavily textured, rubberized handles and a high-quality stainless steel blade, they are ready for whatever comes your way.

PRODUCT FEATURES

- 8CR13MOV S.S. STEEL BLADE
- RUBBERIZED POLYMER HANDLE
- FULL TANG
- S.S. TEXTURED HAMMER POMMEL
- SAWBACK EDGE
- RIGID SYNTHETIC TACTICAL SHEATH
- BLACK OXIDE COATED BLADE

WEIGHT:
5" - 11.12 OZ
7" - 12.64 OZ

5" SPECIAL OPS

15 MULTI-TOOL FIXED BLADE

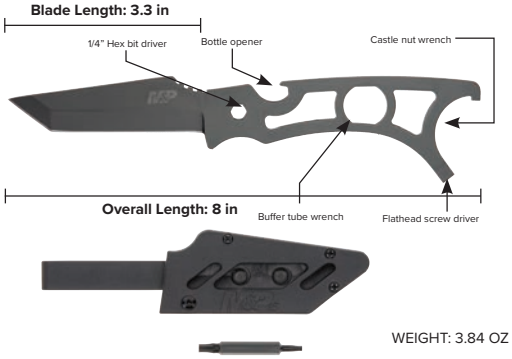

Never choose between carrying a knife or an AR tool again. This M-LOK® / Keymod mountable multi-tool doubles as both your sharpest knife and your go-to AR tool, complete with all the tools you need to fix your MSR in the field.

PRODUCT FEATURES

- HIGH CARBON S.S. CONSTRUCTION
- INTEGRAL TOOLS IN HANDLE
- FULL TANG
- M-LOK®/KEYMOD COMPATIBLE RIGID SYNTHETIC SHEATH
- TOOLS INCLUDED:
  - CASTLE NUT WRENCH
  - BIT DRIVER WITH 1 DOUBLE SIDED BIT
  - BOTTLE OPENER
  - 5/8" BUFFER TUBE WRENCH
  - FLATHEAD SCREWDRIVER

Mountable M&P-15 sheath comes with M-LOK® and Keymod adapters as well as a pocket clip adapter (shown right).

WEIGHT: 3.84 OZ

2026 NEW PACKAGING

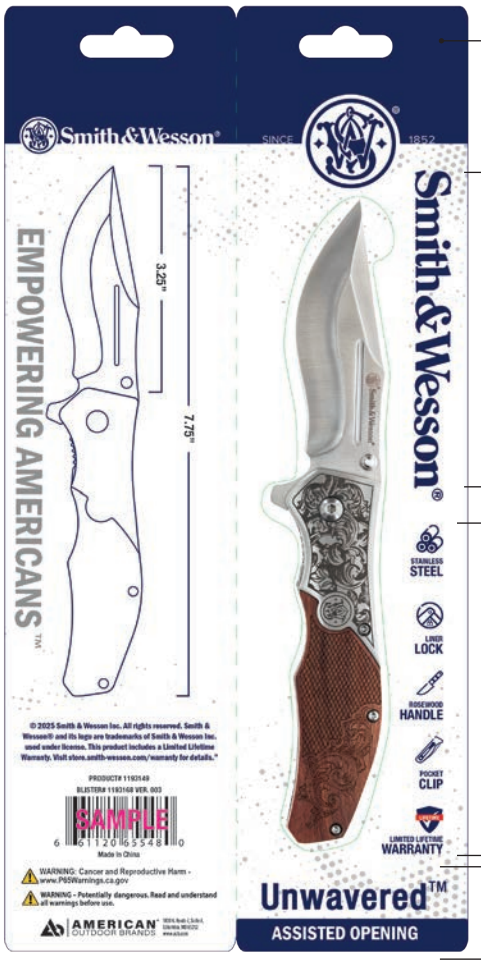

MISSION

Update Smith & Wesson® licensed products with branding that aligns with new firearm and accessories packaging executions.

- Update blister and box styles for S&W® and M&P® Models
- Consistent blister sizes for better planogram layouts
- Leverage weight of colors to stand out better at retail
- Additional messaging, iconography to align with existing design
- Move from 4” width to 3” width

NARROWER WIDTH PACKAGING

GLOSS COATED TRAPPED BLISTER

S&W AND M&P BRANDING PROMINENT ON EVERY ITEM

LINE DRAWING WITH DIMENSIONS ON BACK OF BLISTER
(OMITTED FOR SHEATHED KNIVES)

PRODUCT FEATURES CALLED OUT WITH CONSISTENT ICONS

PRODUCT NAME LISTED BELOW KNIFE AND PRODUCT TYPE LISTED AT BOTTOM

BEFORE

AFTER

GENERAL CARE/USE INSTRUCTIONS

Your cutting tool is produced from the highest quality materials by expert craftsmen and with reasonable care it will serve you faithfully for a lifetime. Below is general information concerning the use and care for your item.

FIXED & FOLDING BLADE KNIVES:

The primary defenses against wear, corrosion and potential injury are to keep your knife sharp, oiled, clean and dry. Proper care of your knife will help to extend the life of the product as well as increase its reliability and durability. Always keep your knife clean. Be sure to clean the handle and blade of the knife after each use. A mild solution of water and soap should remove any debris and dirt that would have accumulated during use (always avoid harsh detergents such as dish soap and chlorine products).

After cleaning your knife always make sure it is then dried (always keep your knife dry when possible). Please always take special care with sensitive handle materials such as leather. We recommend using a soft dry cloth and a small amount of water-displacing oil (we recommend WD-40 or 3-in-1), to apply to the blade, this will help prevent water spots as well as retard rusting and oxidation.

We recommend always keeping your knife oiled. Weather and fingerprints are the main causes of corrosion and rusting on a knife blade. You should always give your blade a light coat of oil after each cleaning and prior to long term storage. If you choose to store your knife for extended periods of time it is recommended to use a desiccant to remove moisture from the air. Stainless steel does not stain, corrodeor rust as easily as ordinary steel, but it is not stain-proof and will rust without proper maintenance.

Always keep your knife as sharp as possible, because a sharp knife is easier to work with and safer to use than a dull one. Fixed-angle sharpening kits are available and recommended if you are new to sharpening blades, a consistent grind from tip to base is necessary to properly sharpen your knife (please note that damage to your blade from home-sharpening is not covered by our warranty).

While not in use you should oil and store your blade in a cardboard scabbard type of sheath. Never store the knife in a leather/nylon/Kydex® sheath (even if the knife comes in these type of sheaths) as these sheaths can retain moisture which will accelerate the rusting/oxidation process. A cardboard sheath will wick moisture away from the blade's surface as well as help to prevent debris and dust from accumulating. For best results, a low moisture/humidity room-temperature environment is preferred for storage. The blade should be re-oiled periodically during this period. Remember that all steels will eventually rust/oxidize, but that with proper maintenance you should experience reliability and longevity on your product throughout the years.

MULTI-TOOLS:

AOB Products Company recommends regular maintenance and upkeep on your multi-tool. For maximum benefit on the life of the product you should regularly clean and dry your multi-tool after use. When necessary, use a light oil on the pivot points. Always be sure to clean the handle, set and blade after each use. A mild solution of water and soap should remove any debris and dirt that would have accumulated during use (always avoid harsh detergents such as dish soap and chlorine products). We do not recommend fully immersing the tool in water. To remove debris from inside the handle you can use a Q-Tip or toothpick. A can of compressed air can also be useful for cleaning these hard to reach areas (please always read the instructions and warnings on the compressed air can as some of these products use an accelerant which could damage the products finish). After exposure to salt water, or if extremely dirty, please first rinse the tool in fresh water or with a mild solution of water and soap then completely dry with a soft cloth. Next apply a desiccant (drying agent) or a light coat of water-displacing oil (we recommend WD-40 or 3-in-1). Finally wipe down and lightly lubricate the tool's surface and pivot points. This process should remove any debris and dirt which could inhibit the tool's functioning but should also help to prevent rusting and oxidation on the surface steel. It is not recommended that you store the tool in a pouch or sheath for long periods of time, moisture can remain trapped in the fabric of the sheath/pouch and or tanning oils in leather sheaths might accelerate rusting and oxidation.

CONSUMER AWARENESS STATEMENT:

The blades that go into every cutting tool are extremely sharp. Be very cautious when opening, using or sharpening this product. Cutting tools are intended to be used as working tools, they are not weapons and should not be used as such. If an injury occurs during the use (or misuse) of a AOB Products Company cutting tool, this is a risk that our customers assume and AOB Products Company can, in no way, be held accountable. Locking systems such as liner locks, safeties, frame locks and lockback mechanisms are added features designed to help keep blades in the open position when fully extended. These systems are not designed to take pressure or blows to the backside (dull side) of the blade and failure of these systems can happen when not used properly. When a cutting tool is used properly the cutting pressure exerted on the blade will always be against the cutting edge of the blade pushing and keeping the blade in the open position; when used properly it is not possible for the blade to close.

NOTE: Not all cutting tools have blades that lock in the open position. If you have purchased a cutting tool with a locking blade please see the instructions below:

HOW TO CLOSE LOCKING KNIVES

LOCKBACK KNIVES: Hold the knife open with the blade pointed down. Depress the lock firmly with your thumb to release the locked blade. Then with your other hand ease the blade into the closed position.

LINER LOCK OR FRAME LOCK MECHANISMS: Carefully hold the knife and move the liner or frame lock to the side to release the locked blade. With your other hand ease the blade towards the closed position. Make sure your handle is clear of the blade's path, slowly close the blade the rest of the way.

Misuse of your product can cause serious injury or even death. Misuse often will result in a product failing and breaking in which cases the AOB Products Company warranty will not apply. Failure to properly maintain your product may cause its mechanisms to not function properly and could also result in injury to you and/or damage to your product.

Use with approved eye protection to protect from debris. Flying debris can result in eye or other injury. Use cutting edge for cutting wood only. Contact with hard objects can result in blade or head chipping. Do not use to strike with or against another tool, hardened nail or other object. Do not use if blade is dull, chipped, otherwise damaged or if handle is broken or loose. Blade is sharp. Handle with care. Contact with blade can result in injury. When not in use, store in safe place.

CAUTION: THIS IS NOT A TOY, KEEP AWAY FROM CHILDREN.

RELEASE, ASSUMPTION OF RISK, WAIVER OF LIABILITY AND INDEMNITY AGREEMENT

By purchasing any item produced by AOB Products Company the buyer assumes responsibility to ascertain and follow all applicable international, federal, state and local laws in owning, carrying, having, shipping, transporting and using any AOB Products Company product. The buyer expressly agrees to indemnify and hold harmless AOB Products Company for all claims resulting directly or indirectly from the ownership, purchase, transportation or use of the item in violation of applicable federal, state and local laws or regulations. AOB Products Company is not liable for misuse of any AOB Products Company product purchased either directly from AOB Products Company or from a dealer/distributor. You must be 18 years of age to purchase AOB Products Company products. AOB Products Company warranty gives you certain legal rights. You may have other rights, which vary in different states and municipalities.

STEEL INFORMATION

Steel is a critical component of any knife. The purpose of this guide is to provide a more detailed look into steel to help assist you in better defining what your own preferences are and why. As a word of caution this information is not intended to be all-inclusive nor could it ever be as the world of steel is ever evolving. The quest for higher performance steels has led to the development of many new, excellent materials over the years and there are currently over 3,000 different types of steel, each having its own positive and negative attributes.

Of course steel is not the only factor that determines a knife's performance. Blade geometry, heat treatment processes, handle geometry and other materials used in the production of the knife all contribute to how the end product will handle particular jobs. It is not possible to tell just by looking at a blade how well the item has been heat treated and it is only possible to make an educated guess as to how well the handle and blade geometry will work. However, by knowing the grade of steel used you are better able to understand the alloying elements involved giving you something measurable to go by when determining your own preferences.

The result of knowing the grade of steel can unfortunately put the end user into a trap of placing too much of an emphasis on the steel itself. A knife is more than just the steel that goes into it and it's important to recognize this. In fact, so many modern steels perform so well that knife decisions can often be made based on other factors than just the marginal increases in steel performances.

Often the question of "what's the best steel" or "which steels rank better than others in terms of best to worst" come up. There is never a truly correct and accurate response to this as the blade geometry of the product, the quality of the heat treatment, the materials used and the tasks, or goals, of the end user all will factor in to determine how well a product will perform and in turn how well the user will be satisfied with the product.

AOB Products Company uses specific blade steels to create the most efficient balance of properties based on the anticipated applications of our products.

Steel is an alloy of iron, other metals and carbon. Stainless steel refers to a family of corrosion-resistant alloy steels which contain a minimum of 10.5% chromium. A common misconception is that stainless steels will not stain, rust, or corrode. Stainless steels will simply stain less than other steels that do not contain chromium. Each alloy in the various steels lends unique properties to the stainless steel.

When selecting the steel for the various products we factor in the overall performance requirements of what the tool will be used for, the goal price range for the end product and the costs of manufacturing and finishing the item(s). As with any materials there are generally trade-offs. For instance, while higher alloy levels and final hardness levels keep an edge longer they also will make it more difficult to field sharpen a blade. Some alloys can be found to be low in nickel, which will result in increased staining if not kept regularly oiled and cleaned after use. Knives that will be placed to hard use must be constructed with very tough steel materials so we will use steels that are considered to have high ductility (or toughness) over a higher hardened steel. Please note that final hardness levels are achieved not only by factors of composition but from proper heat treating and quenching, of which we pay great attention.

AOB Products Company sources premium steel from many international suppliers. The information chart referenced below shows a reasonable range of the compositions of the various steels we utilize. The blade steel we use for each product is included in the catalog to help make this information easy for you to locate.

STEEL TERMS

Alloy: A material that is dissolved in another metal in a solid solution. A material that results when two or more elements combine in a solid solution.

Corrosion Resistant: The ability of a material to resist deterioration as a result of a reaction to its environment. Provided by the elements Chromium (Cr), Copper (Cu), Molybdenum (Mo) and Nitrogen (N).

Ductility: The ability of a material to be stretched or drawn, plastically deform appreciably before fracturing. Provided by the element Manganese (Mn).

Edge Retention: The ability of a material to resist abrasion and wear. Provided by the elements Carbon (C), Chromium (Cr), Manganese (Mn), Nitrogen (N) and Vanadium (V).

Hardness: The resistance of a steel to deformation or penetration analogous to strength. Provided by the elements Carbon (C), Chromium (Cr), Cobalt (Co), Molybdenum (Mo), Nitrogen (N) and Phosphorus (P).

Hardenability: The ability of a steel to be hardened by a heat treating process. Provided by the elements Manganese (Mn), Molybdenum (Mo) and Tungsten (W).

Heat Treating: A controlled heating and cooling process to prescribed temperatures and set limits for the purpose of changing the physical properties and behavior of the metal.

Impact Strength: The ability of a material to resist cracking due to a sudden force.

Rockwell Test (HRC): A measurement of steel hardness based on the depth of penetration of a small diamond cone pressed into the steel under a constant load.

Tensile Strength: Indicated by the force at which a material breaks due to stretching. Provided by the elements Chromium (Cr) and Manganese (Mn).

Toughness: The ability of a material to resist shock or impact. Provided by the element Chromium (Cr).

KNIFE STEEL SELECTION CHART

1070: This is a plain carbon steel which means it has a low resistance to corrosion and low to medium edge retention. The benefit of this steel is that it is very easy to sharpen and will take an extremely sharp edge.

1095: This is a plain carbon steel which means it has a low resistance to corrosion and low to medium edge retention. The benefit of this steel is that it is very easy to sharpen and will take an extremely sharp edge.

4034: A good quality grade of stainless steel. This steel is known for its ability to be honed to a razor sharp edge. While this steel has medium edge retention it is a very easy steel to field sharpen. A choice steel to use for an everyday carry product.

4116: A fine grained stainless steel. The balance of Carbon and Chromium content give it a high degree of corrosion resistance and also impressive physical characteristics of strength and edge holding. Edge retention in actual cutting tests exceeded blades made of 420 and 440 series of stainless steels. Other alloying elements contribute to grain refinement which increase blade strength and edge toughness and also allow for a finer, sharper edge.

420J2: A good quality stainless steel commonly used in knife blades as well as for impact cutting tools such as axes, hatchets and machetes. Known as a hard, strong steel, this steel has decent edge holding capabilities and is easy to resharpen, sticking a good balance of the most desirable traits for knife steel.

2Cr13: A good quality stainless steel commonly used in knife blades as well as for impact cutting tools such as axes, hatchets and machetes. Known as a hard, strong steel, this steel has decent edge holding capabilities and is easy to resharpen.

3Cr13: A good quality stainless steel commonly used in knife blades as well as for impact cutting tools such as axes, hatchets, and machetes. Known as a hard, strong steel, this steel has decent edge holding capabilities and is easy to resharpen, sticking a good balance of the most desirable traits for knife steel.

7Cr17MoV: A good quality stainless steel that has a high tensile strength. This steel has excellent corrosion resistance and can be honed to a razor sharp edge.

8Cr13MoV: A high quality stainless steel similar in properties to AUS-8. This steel exhibits extreme toughness and excellent edge retaining capabilities.

9Cr14MoV: A high quality stainless steel. This steel has good corrosion resistance and excellent edge retaining capabilities.

9Cr18MoV: A higher end stainless steel commonly used in precision surgical instruments. This steel has good corrosion resistance and excellent edge retaining capabilities.

AUS-8: A very high quality stainless steel known for extreme toughness and excellent edge retaining capabilities. This steel has great corrosion resistance and is easy to sharpen.

D2: An air hardened tool steel. Sometimes called a "semi-stainless" steel because it does contain 12% Chromium. This steel offers exceptional edge retention as well as decent corrosion resistance. Somewhat difficult to sharpen, this steel can be finished to a high polish shine.

SK-5: The Japanese equivalent of American 1080 steel, a high carbon steel with Carbon between 0.75%-0.85% and 0.60%-0.90% Manganese. This grade of steel has an ideal balance of very good blade toughness with superior edge holding ability and is used in a variety of hand tools and cutting products.

S30V: This steel contains Carbon along with high amounts of Chromium, Molybdenum and Vanadium. Double tempered for hardness and edge retention this steel has excellent corrosion resistance, but is somewhat difficult to sharpen.

Ceramic: A ceramic is an inorganic, non-metallic solid prepared by the action of heat and subsequent cooling. When used in the application of a knife blade, the ceramic material will stay sharp for much longer than that of a steel knife. The only drawback is the ceramic material is more brittle than steel and can snap from a hard impact.

HANDLE & SHEATH MATERIALS

Saw Cut OT Handle Scales: This lightweight and durable polymer was engineered for its excellent longterm wear characteristics.

Staglon® Handle Scales: This lightweight and durable polymer was engineered for its excellent longterm wear characteristics. Cosmetically designed to mimic Stag Horn.

Aluminum: Relatively soft, durable, lightweight, corrosion resistant, non-metallic metal. Aluminum has about one-third the density and stiffness of steel and is easily machined, cast, drawn and extruded.

TPE: This black thermoplastic elastomer is basically a softer version of TPR and offers a superb flexibility and memory elasticity even under harsh conditions. Most often molded onto a harder sub structure, TPE material offers excellent grip and comfort.

TPR: This thermoplastic rubber is best described as a material which has both the characteristics of rubber as well as plastic. TPR rubber is usually light in weight, has good tear strength, flexible in low temperature, weather resistant, reusable and recyclable and it performs like vulcanized rubber.

PA: A plastic material Polyamides (PA) are semi-crystalline polymers. Polyamides have very good mechanical properties, are particularly tough and have excellent sliding and wear characteristics. Properties vary from the hard and tough PA 66 to the soft and flexible PA 12. Depending on the type, Polyamides absorb different amounts of moisture which also affect the mechanical characteristics.

PP: Polypropylene (PP) is a thermoplastic polymer used in a wide variety of applications. Commonly used in manufacturing processes such as injection molding.

Carbon Fiber: This material is a woven composite of graphite fibers fused together with an epoxy resin. The result is an ultra lightweight handle with an extreme tensile strength. Most often seen with a visible weave-like pattern which can be varied, as can the color of the epoxy used.

G-10: An epoxy filled woven "E" glass composite, reinforced with glass fibers for strength. Originally designed for circuit boards, G-10 offers the knife industry a handle which is impervious to most elements such as oils, water and acids. It can be produced in many colors and finished in a variety of ways, offering different amounts of texture matched to different end users.

Grivory: Polyphthalamide is a thermoplastic synthetic resin that can be used to replace metals in high temperature applications. This material is suitable for other applications such as handle materials in knives and other cutting tools. Typical characteristics are high heat resistance, high chemical resistance, abrasion/corrosion resistance, high tensile strength, high dimensional stability and direct bonding to many elastomers to give plastic-rubber composites.

Leather Sheaths: Our leather sheaths are made of 100% vegetable tanned top grain genuine cowhide. No finished split leather, bonded or imitation leather, nor any chrome tanned leather that can cause corrosion to the knife blades. The leather is "roller coated" for durability with a rich top coat finish. The tough, durable "roller coated" finish provides for protection from the outdoor elements, is more scratch resistant and has shown proven long-lasting wear. The sheaths are stitched with heavy-duty nylon thread in order to provide high tensile strength, durability and longterm wear. The 24 and 20 line durable and baby durable all metal snap fasteners are nickel-plated to prevent rust and corrosion. No plastic snaps are used. Many of the styles receive nickel-plated metal rivets in strategic locations to provide added strength, durability and safety.

Micarta: Technically described as "fabric reinforced phenolic laminate", micarta is created by pouring a resin into a flat pan, then laying down a strip of linen or paper fabric, which then is saturated with the resin. This process is repeated until the desired thickness is achieved. Micarta can be in many different colors, is lightweight and can be finished in many ways.

Nylon Fiber: A synthetic thermoplastic polymer. Engineering grade nylon fiber is processed by extrusion, casting and injection molding and is available in glass-filled variants which increases structural, impact strength and rigidity.

Stainless Steel: A steel alloy with a minimum of 10.5% Chromium. Stainless steel does not readily corrode, rust or stain with water as ordinary steel does, it is not stain proof but rather stains less.

Titanium: A chemical element with the symbol Ti. It is a lustrous transition metal with a silver color, low density and high strength. Two of the most useful properties of the metal are corrosion resistance and the highest strength-to-weight ratio of any metal.

GENERAL TERMS

Annodizing: An electro-chemical coating altering appearance and improving texture.

Black Oxide: A coating used mostly on military knives to avoid reflection.

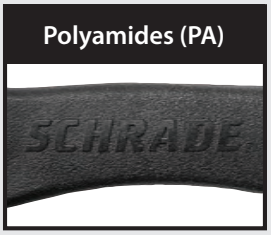

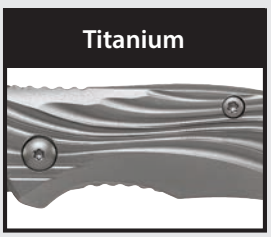

Bolster

Button Lock

Choil

Frame Lock

Handguard

Liner Lock

Lockback

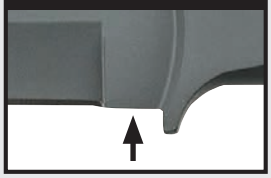

Pommel

Quillion

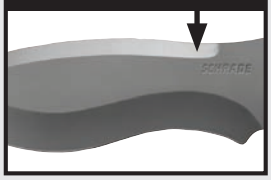

Ricasso

Spine Jimping

Swedge

Tang

Tip-Up/Tip-Down

Black or Grey Ti: A thin black or grey coating of titanium carbonitride, provides corrosion resistance.

Bolster: A piece of metal, generally nickel-silver or stainless steel, that is located at one or both ends of a folding knife handle.

Button Lock: Found mainly on automatic knives, this type of lock uses a small push-button to open and release the blade.

Choil: A choil is a dip or cut out separating the cutting edge from the ricasso. It is also used to describe a cut out, molded or formed area where the handle and blade meet which positions/guards the index finger while gripping the opened knife.

Detent: A minute divot or dimple machined into the blade tang. A ball bearing drops into the detent hole when the knife is in the closed position, helping to hold the knife blade closed inside the handle.

Ergonomics: The applied science of equipment design intended to maximize productivity by reducing operator fatigue, safety and discomfort. Knives which are designed to be comfortable and less fatiguing when used are labeled "ergonomic".

Finger Choil: A purposeful and specific area/curve cut-out between the blade and handle. It creates a grip position point closer to the cutting edge for better control while cutting.

Frame Lock: Also known as the integral lock or monolock, this locking mechanism works in a manner similar to the liner lock but uses a partial cut-out of the actual knife handle, rather than a separate liner inside the handle to hold the blade in place. To close you simply move the frame out of the way and rotate the blade into the closed position.

Handguard: Protrusion/expansion on the knife's handle proximal to the blade keeping the hand safely positioned on the handle inhibiting sliding forward.

Lanyard Hole: A small hole in a knife's handle for threading through a cord/string as a backup attachment when using the knife around water or where it may be dropped and lost.

Liner Lock: The liner lock's locking side liner is split from the top toward the bottom, similar to an automotive leaf spring (also called a lock bar) that when the blade is fully open will butt up against the tang of the blade to prevent the blade from closing. To release the lock, the user presses the lock bar back toward the handle side, at which time the blade is free to close. In the closed position the lock bar (leaf spring) rests alongside the handle and the blade.

Lockback: Also known as a spine lock, the lockback includes a pivoted latch affixed to a spring, and can be disengaged only by pressing the latch down to release the blade.

M.O.L.L.E.: Modular Lightweight Load-Carrying Equipment is the current system of loadbearing equipment based in the Pouch Attachment Ladder System (PALS) used by military and law enforcement. It consists of a grid of nylon webbing allowing the modular attachment of pouches and other equipment to achieve customized and mission-specific configurations.

Pommel: The knob or expansion found on the butt-end of a knife handle.

Quillion: A handguard protruding from both sides of the handle (where handle and blade meet) stopping the hand from slipping up onto the blade.

Ricasso: Unsharpened and thicker portion of the blade, just before the handle. Allows users to choke up on the blade for better control.

Scale: A knife handle made of scales or slabs of material that are riveted, screwed or bonded together.

Skeletonized Liners: Internal steel handle liners that are hollowed out (skeletonized). In removing sections of the steel, bulk and weight are reduced while allowing the liner to maintain its strength and rigidity.

Slip Joint: Non-Locking Blade : blade having a spring acting against it, which provides some resistance to its opening and closing as it pivots within the handle.

Spine Jimping: Small serrations, notching or texturing located on the spine of a blade where the hand or finger grips. Jimping creates tactile resistance, adds purchase, traction and slip resistance.

Swedge: Blade grind where a portion of the blade's spine is removed to reduce weight, add style to a blade or both.

Tang: The portion of the blade where it connects to the handle.

Tip-Up/Tip-Down: Refers to which direction the folded knife is positioned by its pocket clip. When closed and clipped in a pocket, whichever direction (up or down) the blade's tip sits defines if it is termed tip-up or tip-down.
